

+ AI-POWERED CRYPTO INTELLIGENCE

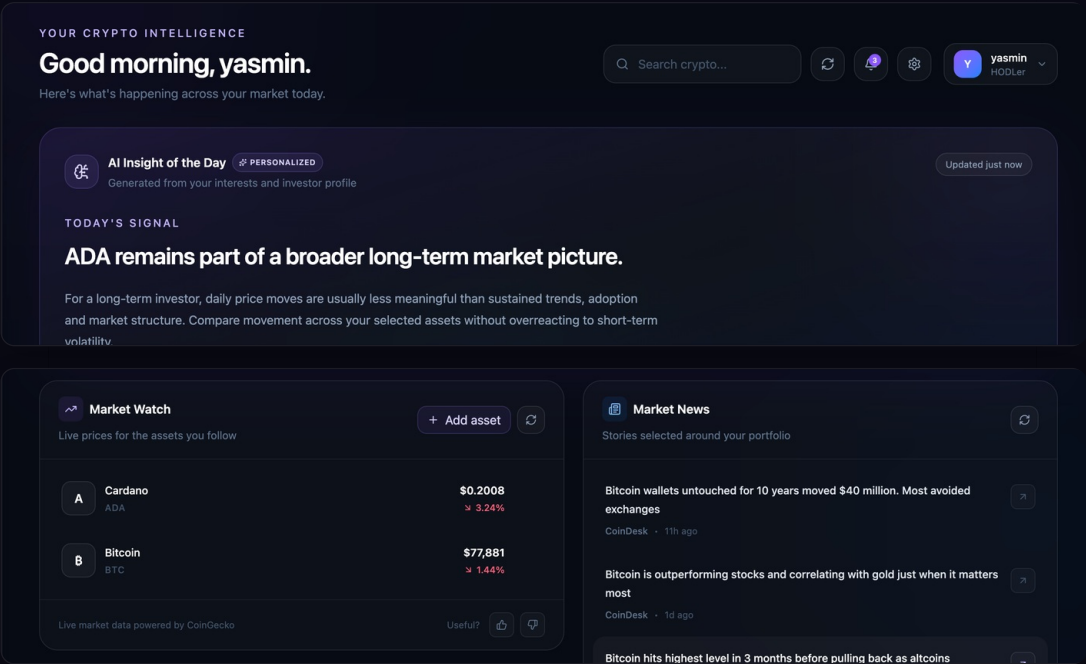

# Your crypto world, curated for you.

BlockMind is a personalized crypto dashboard: users choose their assets, investing style and content preferences, and the app builds market news, live prices, an AI-generated daily insight and even a crypto meme around that profile — with thumbs up/down feedback feeding future personalization.

## ONBOARDING & PERSONALIZATION

## PERSONALIZED DASHBOARD

**AI Insight of the Day**  
 Generated per user from assets, investing style & preferences, with validation and safe fallback.

**Market Watch & News**  
 Live CoinGecko prices for followed assets, plus the latest CoinDesk market headlines.

**Feedback Loop**  
 Thumbs up/down on every section, stored per user to power future recommendation ranking.

## TECH STACK

- Frontend
- React · TypeScript · Vite · Tailwind
- Backend
- Node.js · Express · TypeScript · JWT
- Database
- MongoDB Atlas + Mongoose
- External APIs
- CoinGecko · CoinDesk RSS · OpenRouter
- Deployment
- Vercel (frontend) · Render (backend)

## IF I HAD MORE TIME

I'd use the stored feedback to automatically re-rank content for each user, personalize the meme selection based on assets and investor style, and add price alerts, a watchlist performance view and historical charts to the coin pages.

I used **ChatGPT** and **Cursor** throughout as development tools — for planning the architecture, debugging TypeScript and deployment issues, and reviewing my code. I reviewed and tested every suggestion myself through local builds, browser testing and production checks, while making the final product and design decisions throughout the project.
