

+ AI-POWERED CRYPTO INTELLIGENCE

Your crypto world, curated for you.

BlockMind is a personalized crypto dashboard: users choose their assets, investing style and content preferences, and the app builds market news, live prices, an AI-generated daily insight and even a crypto meme around that profile — with thumbs up/down feedback feeding future personalization.

ONBOARDING & PERSONALIZATION

PERSONALIZED DASHBOARD

TECH STACK

Frontend
React · TypeScript · Vite · Tailwind

Backend
Node.js · Express · TypeScript · JWT

Database
MongoDB Atlas + Mongoose

External APIs
CoinGecko · CoinDesk RSS · OpenRouter

Deployment
Vercel (frontend) · Render (backend)

WORKING WITH AI

I used **ChatGPT** and **Cursor** throughout as development tools — for planning the architecture, debugging TypeScript and deployment issues, and reviewing my code. I reviewed and tested every suggestion myself through local builds, browser testing and production checks, while making the final product and design decisions throughout the project.

Auth & JWT

Backend caching

Fallback handling

Feedback storage

IF I HAD MORE TIME

I'd use the stored feedback to automatically re-rank content for each user, personalize the meme selection based on assets and investor style, and add price alerts, a watchlist performance view and historical charts to the coin pages.
